

All the solar systems and every object they contain

Astronomers have just caught a glimpse of a large, bright object zipping through the solar system. The object's potentially interstellar origins excited scientists across the globe, and the next ...

In July of 2015, a spacecraft named New Horizons arrived at Pluto after a long journey. It took amazing pictures of this dwarf planet and will continue to study other objects in the Kuiper Belt ...

It appears our solar system is getting more popular with out-of-towners. Astronomers have found a third interstellar object, something that has origins beyond our own solar system. The object ...

Solar system - Planets, Moons, Orbits: The eight planets can be divided into two distinct categories on the basis of their densities (mass per unit volume). The four inner, or terrestrial, planets--Mercury, Venus, Earth, and Mars--have rocky ...

Why Ammonite matters Only three other known objects share similar distant orbits, which are largely untouched by Neptune's gravitational influence. These Sedna-like bodies offer rare clues about the Solar System's early ...

Correct Answer c. the Sun Explanation of the Correct Answer The Sun is located at the center of our solar system. All the planets, asteroids, comets, and other objects in our solar system orbit ...

There are eight main planets, including Earth, and many moons that orbit them. There are also dwarf planets like Pluto, as well as asteroids, comets, meteoroids, and tiny particles called interplanetary dust. Our Solar System is ...

Older than the Sun, the planets, and every familiar object in our celestial backyard. Ancient comet enters our solar system 3I/ATLAS is only the third object ever spotted entering our solar ...

Milky Way Galaxy (sometimes simply called the Galaxy), large spiral system of about several hundred billion stars, one of which is the Sun. It takes its name from the Milky Way, the irregular luminous band of stars and ...

Gravity is the force by which a planet or other body draws objects toward its center. The force of gravity keeps all of the planets in orbit around the sun. What else does gravity do? ...
