

Amy wan lifepo4

LiFePO₄ is a promising candidate for high energy density, high power, and long cycle life applications. It has a high theoretical capacity of 170 mAh/g and a high operating voltage of 3.6 V. The material is stable and has a long cycle life. It is also a safe material and has a low self-discharge rate. It is a good choice for applications that require high energy density, high power, and long cycle life.
