

The Non-Wire Alternative (NWA) approach has gained attention as a strategy to replace or defer traditional grid infrastructure upgrades by leveraging integrated solutions combining Energy ...

This article explores how utility-scale energy storage is reshaping the electric grid, what technologies and architectures are leading the market, and how developers and utilities are ...

A new white paper from GridBeyond is sounding the alarm for battery storage operators: The era of simple charge-low/discharge-high strategies is over--especially in competitive power ...

This project supports Finland's renewable energy grid and is part of the FRV AmpTank joint venture. The company is developing battery storage projects for both short-duration and long-duration storage at multiple locations.

Dublin-based smart energy solutions company GridBeyond is leading the optimisation of a battery energy storage system (BESS) in California. GridBeyond began operations at the Big Rock ...

Using advanced control and real-time optimisation solutions, GridBeyond provides solutions that unlock the potential of distributed generation to improve grid reliability and increase renewable energy output, while helping ...

Central to its offering is GridBeyond's proprietary AI-based Bid OptimiSer, which matches market price forecasts with real-time battery performance simulations to drive optimal bid strategies in ...

The sodium-ion rechargeable battery market is poised for significant growth, driven by increasing demand for sustainable and cost-effective energy storage solutions. While precise market sizing data is absent, considering the ...

Imagine waking up each day knowing your energy comes directly from the sun, free from power outages and rising utility bills. Yes, achieving true independence with off-grid solar panels is ...

In addition to the successful standalone fundraise, LiNa also secured advanced commitment for future funding. LiNa Energy has developed low-cost solid state sodium batteries, with a focus on meeting the growing need for ...

Electric vehicle (EV) batteries are rechargeable lithium-ion or solid-state systems storing 20-120 kWh to power electric motors. Key applications span cars, buses, e-bikes, and marine vessels. ...
