

In the same month, Hebei province vowed to push forward construction of power storage projects beside electricity generation plants and actively promote a proper distribution of power storage system on grids. The ...

CAISO data shows that batteries absorbed over 38,897 MWh of electricity, mostly from solar, that day. Without storage, curtailment would have been 67% higher, or about 38% higher without ...

Battery storage operators in Texas and California are facing a new reality: the old playbook of "charge low, discharge high" is no longer enough. According to GridBeyond's Q2 2025 report, ...

Ampt announced the deployment of its string optimizers to power a 65-MW solar project located within the California Independent System Operator (CAISO) region. The PV power plant includes a DC-coupled 25-MW / 100-MWh (4 ...

A new GridBeyond report finds that succeeding in saturated markets requires software-led agility and real-time decision-making. Battery storage operators in Texas and California are facing a ...

In 2023, ancillary services-focused approaches yielded solid returns in ERCOT, while basic charge-low/discharge-high strategies were effective in CAISO. However, the rapid deployment ...

Existing battery projects in California and Texas see upside, while hybrid storage bets in the Midcontinent Independent System Operator (MISO) territory and the Southeast face shrinking margins under the revised tax credit rules.

Battery Energy Storage Systems Optimization and Sustainable Development Goals In 2023, ancillary services-focused approaches yielded solid returns in ERCOT, while basic charge ...

Evolving market dynamics in ERCOT and CAISO, the two leading US electricity markets for battery storage, call for smart optimisation strategies, write Ali Karimian and Alden Phinney of ...

For the first five months of 2025, CAISO data showed solar electricity curtailment declined by 12% as a share of generation, falling from 13% to 11.5%, even as solar output grew 18% year over year ...
