

Carbon dioxide meaning

Carbon footprint, amount of carbon dioxide emissions associated with all the activities of a person or other entity. It includes direct emissions, such as those that result from fossil fuel combustion, as well as emissions required ...

Combustion, a chemical reaction between substances, usually including oxygen and usually accompanied by the generation of heat and light in the form of flame. Combustion is one of the most important of chemical ...

Carbon, chemical element that forms more compounds than all the other elements combined. Carbon is widely distributed in coal and in the compounds that make up petroleum, natural gas, and plant and animal tissue. ...

Fermentation, chemical process by which molecules such as glucose are broken down anaerobically. More broadly, fermentation is the foaming that occurs during the production of wine and beer, a process at least ...

Carbon capture and storage (CCS), the process of recovering carbon dioxide from the fossil-fuel emissions produced by industrial facilities and power plants and moving it to locations where it can be kept from entering the ...

What is Carbon Dioxide? Carbon dioxide is a vital gas that surrounds us, invisible and scentless. It consists of one carbon atom and two oxygen atoms. CO₂ typically exists as a gas, but it can transform into liquid ...

Carbon dioxide (CO₂) is a naturally occurring gas composed of one carbon atom and two oxygen atoms, vital for life on Earth. It is a primary greenhouse gas, meaning it traps heat in the ...

Greenhouse effect, a warming of Earth's surface and troposphere (the lowest layer of the atmosphere) caused by the presence of water vapor, carbon dioxide, methane, and certain other gases in the air. Of those gases, ...

Carbon dioxide is a vital gas that surrounds us, invisible and scentless. It consists of one carbon atom and two oxygen atoms. CO₂ typically exists as a gas, but it can transform into liquid under pressure or solidify into ...
