

WEG has announced the signing of contracts with Alupar for the supply of a transmission grid stabilization system for Chile. The scope includes a solution with synchronous condensers, ...

Now grid operators are faced with the challenge to provide sufficient system inertia of synchronous generators with high rotating masses to stabilize the grid. A SVC PLUS FS® (frequency stabilizer) can solve this challenge as it ...

The grid needs it to maintain voltage reliability and stability during faults such as lightning strikes or equipment failures. Grid stability services are now in high demand as a response to the onslaught of renewable capacity additions (585 ...

Strategically located south of Kebei Substation and west of the Huaguan Expressway, the project--named the "Grid Stabilization Energy Storage System"--is designed to enhance grid ...

By holistically investing in digital tools for grid stabilization alongside physical assets, the industry can avoid instability and blackouts, ensuring a sustainable future powered reliably by clean ...

The integration of renewable energy sources into hybrid microgrids (HµGs) holds the potential to improve grid voltage profiles, but without proper optimization, it can also lead to performance ...
