

National development and reform commission studies energy storage cost recovery mechanism

By the end of May, the country's installed renewable energy capacity reached 2.09 billion kilowatts, more than double the figure at the end of the 13th Five-Year Plan period (2016 ...

China will implement a batch of demonstration projects featuring advanced green and low-carbon technologies, which will provide strong support in achieving its carbon peak and neutrality goals, the National Development and Reform Commission said.

BEIJING, July 7 (Xinhua) -- China will further optimize the national network layout of charging facilities and steadily build a high-power charging infrastructure system featuring a rational layout and high efficiency.

Chinese authorities have released guidelines to promote the recycling of decommissioned wind-power and photovoltaic equipment, the National Development and Reform Commission, the country's economic and reform planning authority, said.

The move aims to enhance carbon footprint management for key products, promote green and low-carbon transition in related industries, and further spur green and low-carbon consumption, according to the document.

According to NDRC, the "N" policies will include implementation plans for carbon peaking in the fields of energy, industry, transportation, urban and rural construction and others, as well as supporting measures on science and technology.
