

Simple explanation of solar energy

I've developed this three-part "Solar 101" beginners guide to get you up to speed ASAP: Part 1 - Understanding Solar - the page you are reading - goes through the basic principles of residential solar energy. Part 2 - Buying ...

Greenhouse effect, a warming of Earth's surface and troposphere (the lowest layer of the atmosphere) caused by the presence of water vapor, carbon dioxide, methane, and certain other gases in the air. Of those gases, ...

Part 1 - Understanding Solar - the page you are reading - goes through the basic principles of residential solar energy. Part 2 - Buying Solar - covers the things you should know when comparing solar quotes and ...

What is Solar Energy? Solar energy is the energy that is emitted by the sun in the form of electromagnetic radiation, primarily light and heat. This energy can be harnessed using ...

Transitioning to solar power is an excellent way to lower your electricity costs and reduce your environmental impact. This guide offers a comprehensive overview for anyone considering making the switch to solar, covering everything from ...

Introduction to Solar Energy Imagine capturing the sun's rays and turning them into electricity. That's essentially what solar energy is all about. Solar energy harnesses the power of sunlight ...

What is a solar eclipse? A solar eclipse happens when, at just the right moment, the Moon passes between the Sun and Earth. Learn all about solar eclipses in this video! "What Is ...

With the popularization of solar energy, a renewable energy source, more and more families are beginning to use household solar panels to power their homes, making it even more important ...

Solar energy is generated by harnessing the sun's light and heat and converting it into electrical or thermal energy to power homes, commercial spaces, factories--basically anywhere that uses electricity. Is solar energy ...

Bohr model, description of the structure of atoms proposed in 1913 by the Danish physicist Niels Bohr. The Bohr model of the atom, a radical departure from earlier, classical descriptions, was the first that incorporated ...

Renewable energy, usable energy derived from replenishable sources such as the Sun (solar energy), wind (wind power), rivers (hydroelectric power), hot springs (geothermal energy), tides (tidal power), and biomass ...

Simple explanation of solar energy

Solar system, assemblage consisting of the Sun and those bodies orbiting it: 8 planets with more than 400 known planetary satellites; many asteroids, some with their own satellites; comets and other icy bodies; and ...

Gravity is the force by which a planet or other body draws objects toward its center. The force of gravity keeps all of the planets in orbit around the sun. What else does gravity do? ...

A solar system connected to the utility grid through a bi-directional net meter is known as a grid-connected PV system. It is known by various names, including a grid-connected energy system, a grid-tied solar system, and an on ...

Solar energy is a clean, plentiful, and renewable source of power that is produced from the sun's heat and radiant light. Solar energy has become a practical answer as the world struggles with the pressing need to switch to ...

Mercury is the smallest planet in our solar system. It's just a little bigger than Earth's Moon. Mercury itself, though, doesn't have any moons. It is the closest planet to the Sun, but ...

Solar panel, a component of a photovoltaic system that is made out of a series of photovoltaic cells arranged to generate electricity using sunlight. The main component of a solar panel is a solar cell, which converts the Sun's ...

Scientists named this stuff "dark energy". We don't know much about dark energy, but we do know there is a lot of it. Dark energy makes up 68%, about two-thirds, of the universe. This galaxy is right... Dark matter is pretty ...

Solar energy is the radiation from the Sun capable of producing heat, causing chemical reactions, or generating electricity. The total amount of solar energy received on Earth is vastly more than the world's current and ...

An off-grid solar system's size depends on factors such as your daily energy consumption, local sunlight availability, chosen equipment, the appliances that you're trying to run, and system configuration.
