In primary school, your child will learn about the following key geometric shapes: spheres, cones, prisms and pyramids. It's worth knowing that geometrically prisms incorporate more solid shapes than you might ...

Regular polyhedra generalize the notion of regular polygons to three dimensions. They are three-dimensional geometric solids which are defined and classified by their faces, vertices, and edges. A regular polyhedron has the ...

Solid figures are identified according to the features that are unique to each type of solid. Specifically, you can observe the numbers of faces, edges, and vertices, as well as the shape of the base. The flat surfaces of a solid ...

Cross Sections A cross section is the intersection of a figure in three-dimensional space with a plane. It is the face you obtain by making a "slice" through a solid object. A cross section is two-dimensional. The figure (face) ...
